

Water Savings

€91,000 Saved

Litres of water Saved

THE CHALLENGE

The 4 Star Midleton Park Hotel, a member of The Talbot Collection, is located in the bustling East Cork town of Midleton. They were getting excessive water utility bills and wanted to improve their water management as they never had any visibility over their water usage.

THE OUTCOME

As a high-quality hospitality service, it was extremely important to find a solution which improves water, energy, sustainability, time savings and an overall improvement in water management. Midleton Park Hotel approached SMART FLOW for efficient water management. After one hour of installation, SMART FLOW was able to identify a major hidden leak within the building. This was promptly located and resolved by the hotel's maintenance team. This saved the hotel- 100,000 Litres per day which will add up to a savings of 36.5 Million litres of water per year. The cost savings will be €91,000 per year.

“As Group Sustainability Manager of The Talbot Collection, water conservation was one of my main concerns in our Hotels. We highlighted our issues with water usage in one of our Cork-based properties, Midleton Park Hotel. SMART FLOW identified the issues and provided the insights to resolve them. Along with providing us with full visibility of our water usage. From the initial demo call, through installation to resolving problems, the SMART FLOW team was quick, efficient and professional. After achieving superb results, we are expanding SMART FLOW across all properties in The Talbot Collection.”
